Bella sliding

With the product range of Bella Sliding System, the most accurate solutions have been created with specific details.

Product Range

The system includes 4 different frame profiles including two track sliding frame, two track sliding frame with inbuilt flyscreen rail, Mono fix and slide frame and two track sliding frame with a built in architrave.

Bella Sliding sash profiles offer two different options (sliding window and sliding door) which have been aesthetically designed to provide a wider view.

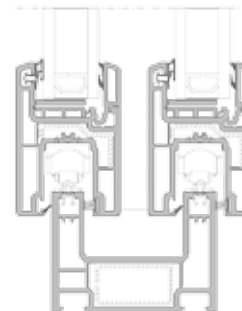

If preferred, 20 mm Double Glazing or 6.38 mm Single Glazing Laminated glass applications can be used.

Insulation

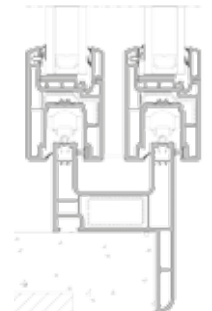

During the design of the system, various features were added to the products aiming to increase the insulation of sliding windows and doors. With the application of adding a gaskets instead of brushes in the sliding sash profile, air permeability of openings has been reduced and as a result, better insulation has been achieved. With gaskets also introduced in the interlocking profiles, insulation of the system has been also further increased.

Application

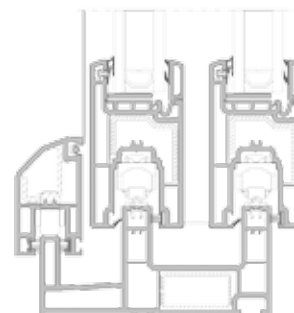

Bella System is compatible with all the other Deceuninck systems. More aesthetic appearance can be achieved in the openings by using the auxiliary profiles (aegean sill, clip-on sill, frame extension 40 /75...) to the system. All Deceuninck Roller Shutters, Flyscreens and Louver Shutters can be attached to the Bella window and door applications.
